

INTRODUCING

# Mobiqam Solar Panel

## POWERING MORE SUSTAINABLE OPERATIONS MOBIQAM SOLAR SOLUTION

Maximise cost efficiency and logistical simplicity for your Mobiqam system with the integration of a solar kit.

By incorporating a solar panel onto the pole mount with your Mobiqam, you can substantially extend its operational time while drastically reducing the need for battery replacements and maintenance.

Embrace the benefits of solar power to enhance the efficiency and affordability of your Mobiqam system with extended operational time capability.

# Benefits of the Mobiqam Solar Panel

## COST-EFFECTIVENESS SOLUTION

### REDUCING COST AND LOGISTICS

By adding a solar panel to your Mobiqam unit, you greatly increase its operational time without intervention. This translates to lowering operational expenses while enhancing overall sustainability.

### Protection for the busy summer months!

The graph on the right illustrates the operational time in days of a Mobiqam unit equipped with a 2kWh battery. This setup runs an Axis Q3615 camera with a 6-watt power consumption and utilizes a 100Wp solar panel. The data reflects real-world performance measured in Belgium during 2023.

**Key Takeaway:** Based on these findings, a similar Mobiqam configuration can potentially operate in Zone B of Europe (including many European countries) for nearly half the year without requiring battery changes.

This represents significant savings for semi temporary deployments.

#### Lower Operating Costs

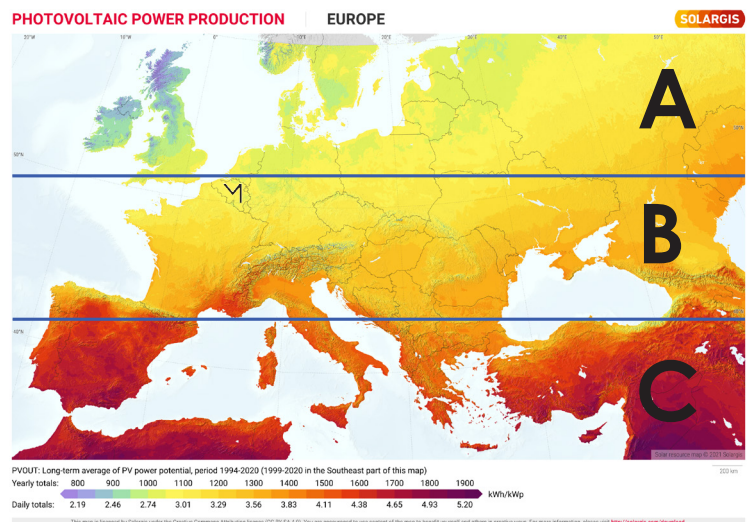

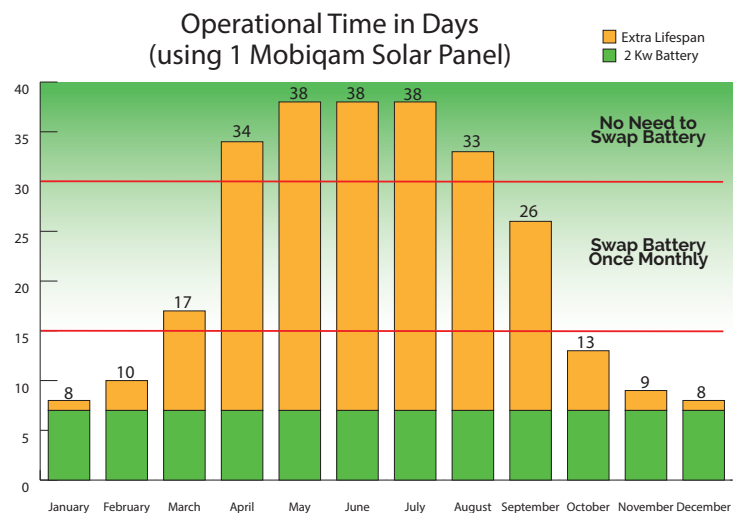

- Longer deployment times
- Save battery maintenance technicians
- Installation by just one technician
- Reduce reliance on the grid and potentially save electricity bills for your Mobiqam during the busy summer months

#### Sustainable Operations

Embrace clean energy and showcase your commitment to environmental responsibility with a solar-powered Mobiqam solution.

### Extend Your Deployment Time Add a Second Solar Panel

For users requiring even longer deployments throughout the year, the option to add a second solar panel is available. This simple upgrade significantly extends your Mobiqam's operational time, maximizing the benefits of solar power.

We're committed to keeping your Mobiqam running smoothly

#### Note:

Thanks to Mobiqam's innovative design, a single technician can install our solar panel bracket.
