# City Surveillance

ENHANCING COMMUNITY SAFETY AND SECURITY

As cities become more dynamic, the need for temporary and flexible monitoring infrastructures is more important than ever. Mobicam is an autonomous, mobile, monitoring system that can be rapidly deployed and managed in any location, making it the perfect choice for traffic and smart city applications.

## CRIME RATES DROP BY 22% IN THE CITY OF HASSELT

### SAFE CITY

Like every big city, Hasselt (Belgium) puts a lot of effort in crime prevention and keeping everybody safe.

The police force of Hasselt set up Mobjams, combined with a surveillance camera, where they expected criminal activity, which helped them to catch perpetrators red-handed. Very much so that they were able to reduce crime rates by 22% within five years time.

*“With Mobjam we are not only able to increase the sense of security among inhabitants and visitors, but a strong camera network is also a helpful tool for the police in solving crimes in the neighbourhood.”*  
Philip Pirard, Chief of Police of Hasselt

## USING AI TO PROTECT CITY INFRASTRUCTURE

### SMART CITY

Local authorities in Lokeren were alarmed by the rapid deterioration of a specific road. By rapidly deploying a Mobjam unit, to collect data and better understand the reason for this.

The data collected by Mobjam confirmed their suspicions: several vehicles were violating the 7.5-ton weight limit. Authorities were notified of each infraction, allowing them to issue fines with visual verification and make further preventative decisions.

Mobjam is a mobile AI-powered surveillance system that can collect an array of valuable data using different sensors. This data can then be analysed and used in the decision-making process to create better smart cities.
