

SUCCESS STORIES

Construction Site Surveillance

OPTIMISING CONSTRUCTION SITES

Mobiqam is a mobile, autonomous and rapid deployable surveillance system ideal for protecting and monitoring construction sites. Mobiqam can be used to improve security, safety, and efficiency at construction sites. Mobiqam's form factor and management platform allows for the solution to easily adjust to a construction site's constantly changing needs. It helps deter theft and vandalism, protects workers safety, and helps engineers manage multiple sites remotely. It is a valuable tool for any construction company that wants to protect its assets, workers, and bottom line.

RAPID DEPLOYMENT SURVEILLANCE

Construction Site Surveillance

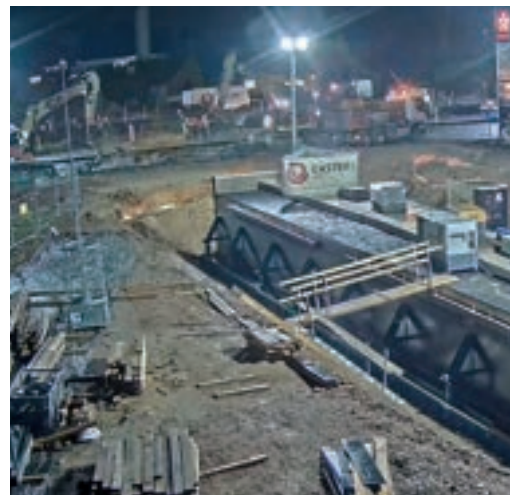

SUPERVISION OF LARGE PROJECTS

PROTECTING EQUIPMENT

The renovation of the Philips Bridge was one of Hasselt's (Belgium) largest renovation projects, which took one and a half years to complete. The contractor needed a safe zone to protect their heavy equipment, which they created by using Mobiqam.

The Mobiqam was connected to the power grid so its battery functioned as a 3-day UPS.

Extra: The contractor used Mobiqam to make a time-lapse of the project from beginning until end which was spread throughout international media for promotion purposes.

IMPROVING CONSTRUCTION SITES

AI & SENSORS

By being able to be placed at the right location, Mobiqam can improve construction sites safety and productivity. For instance, if a worker is not using their hard hat or has slipped and fell, a notification can be sent to supervisors or safety personnel. Prompt detection can lead to timely intervention, reducing the risk of serious harm.

Another example is real-time project monitoring, which results in integrating data from different sensors with AI. This improves visibility of the project progress, allocation of resources and performance metrics, allowing engineers to make data-driven decisions instead of guesswork.
